Manlift Ticket Saskatoon

Manlift Ticket Saskatoon - The Manlifts and Elevated Platforms course provides training on the rules, regulations and proper application of safe operating measures and work practices involved in daily activities for people who work using this machinery. The program has been designed for individuals who are actively involved in these activities or individuals who have a basic knowledge of this equipment.

Aerial platforms and manlifts have become integral and common equipment in industrial settings over the past few decades. These equipment provide an easy way to lift employees close to what must be performed on a stable platform apparatus, allowing staff to do tasks with greater safety and comfort rather than being perched on top of ladders or scaffoldings.

Similar to every other tool, manlifts are only safe if they are used correctly. Since they elevate workers above floor or ground level, accidents could easily occur and this could cause serious injuries or death for both the manlift operators and any passerby who might be unlucky enough to be standing below.

There are a variety of models of manlifts. The majority fall into 1 of 2 categories: the articulating boom lift, that has the capability of both horizontal and vertical movement and the scissors lift, which is capable of moving upward and downward.
