

## Aerial Lift Certification Saskatoon

Aerial Lift Certification Saskatoon - Aerial Lift Certification is for personnel who need a thorough knowledge of aerial lift safety. Maintenance workers, construction craftsmen and supervisors require this training to make sure that inspectors and operators are qualified. State, federal and provincial rules require businesses to be certified to be able to carry out in-house aerial lift inspections.

Most workers who are required to perform tasks at elevated level will normally utilize the same means to get to these desired heights, regardless of the kind of work that has to be performed. Aerial lifts and scissor lifts are the mechanized machines used to lift equipment and workers to elevated worksites.

Cherry pickers or bucket trucks are boom-supported aerial platforms. The primary hazards related to boom-operated platforms are electrocutions, tip-overs and falls. Certification guarantees that workers who utilize aerial lifts are properly trained to operate the machine safely. Training likewise ensures that workers know how to maintain aerial work platforms in accordance with the manufacturer's instructions.

Aerial lift training certification programs will consist of the following: Aerial lifts that are mounted to vehicles, Boom-supported aerial lifts and scissors lifts. Trainees would learn about safe operating procedures and will gain an understanding about the hazards that normally cause aerial lift incidents. They will be technically competent in the various kinds of aerial lifts, as well as terms and components. From interpreting rated capacity charts to selecting the right aerial lift for the job, the certification program will provide workers with everything they must know to safely carry out their work.

Inspectors and supervisors who have the job to check aerial lift devices need to know how to check booms, gears, operating mechanisms, structural components, control systems and functions, braking systems, power plants, attachments, pins and shafts, hydraulic, pneumatic and electric components, emergency safety devices and operator aids, et cetera. Training would include the following: the role of the inspector in lessening accidents and liability exposure; how to perform a pre-use, monthly and annual check; how to apply and interpret rules about aerial lift safety standards; how to write inspection reports; checklists and techniques; inspection procedures; applying and understanding the three levels of aerial lift inspection; following record keeping requirements; and when to remove defective aerial lifts from service.
